presented by Bureau of Business Research (BBR)

November/December 1997

Strong Economic Growth Will Continue for the Next Two Years

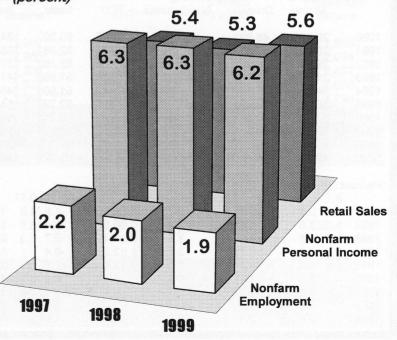

The year-end analysis shows the state's economy growing rapidly with prospects for continued growth over the next two years. Total nonfarm employment will grow 2.2 percent in 1997 and just under that rate in 1998 and 1999 (Figure 1 and Table 1). Total nonfarm personal income will grow 6.3 percent in both 1997 and 1998, and 6.2 percent in 1999. Despite snow in the middle of the harvest season in parts of eastern Nebraska, net farm income will reach \$2.3 billion in 1997, just under \$2.5 billion in 1998, and \$2.5 billion in 1999. Total net taxable retail sales will grow 5.4 percent in 1997, 5.3 percent in 1998, and 5.6 percent in 1999. Both the sales and income forecasts rely on a slight uptick in inflation in 1999.

Nonfarm Employment

Nebraska's 2.2 percent total nonfarm employment growth on a year-to-date basis through September (Table 2) is identical to full-year growth in 1996. Total nonfarm employment will grow 2 percent in 1998 and 1.9 percent in 1999. Comments on sector growth follow.

Construction activity is unsettled. Due to uncertainties in federal highway construction funding, the construction employment forecast is somewhat tentative. Residential permits statewide have slowed in the first half of the year, especially in multifamily construction. That implies a future slowdown in residential construction unless permits rebound. The third major component of construction, nonresidential buildings, is operating at very high levels, especially in the Omaha area. Employment will expand by nearly 5 percent in construction and mining in 1997. The rate of expansion may slow in the next two years because of labor shortfalls.

Figure 1
Key Economic Growth Rates
(percent)

- Durable manufacturing employment is expected to grow at least 2.7 percent per year in 1997, 1998, and 1999. Nondurable manufacturing employment growth is at a standstill and is expected to remain so in 1998 and 1999. There is speculation that lower-paid nondurable manufacturing employees are finding higher-paying jobs in the durable manufacturing sector.
- Transportation, communications, and utilities (TCU) employment is enjoying a growth spurt in 1997. Railroading and trucking are leading the way. Growth will continue in the sector at a moderated pace.
- Retail trade employment will grow slowly as the competition for labor intensifies. The retail industry has largely completed its move toward replacing full-time employees with part-time employees, a movement that had caused the number of retail jobs to grow rapidly.
- The services sector will grow rapidly over the 1997 to 1999 period with a growth rate of 3.6 percent expected each year. The services sector, the largest employment sector, is currently running third in employment growth behind construction and mining and TCU. By 1999 total services employment in Nebraska will be just below one-quarter million jobs.
- The federal government sector will continue to exhibit decreasing job numbers in 1997, 1998, and 1999. Continuing concern over balancing the federal budget implies

little or no growth in this sector for the foreseeable future. However, relocation of federal jobs within the U. S. can occur.

Despite hiring freezes and legislation designed to curtail spending, state and local government employment will grow by just under 1.0 percent this year. While the growth rate will drop marginally, state and local government employment will continue to grow in 1998 and 1999.

Nonfarm Personal Income

Total nonfarm personal income is expected to rise 6.3 percent annually from 1997 to 1998 and 6.2 percent in 1999 (Table 3). A discussion of major Nebraska nonfarm income forecast components follows.

Wages and salaries are responding to both an increase in total employment and to increased wage pressures. Wage pressures have been signaled in the Nebraska Quarterly Business Conditions Survey (NQBCS) (see September 1997, Business in Nebraska). Ironically, wage pressures in Nebraska are mounting at a time when national price indexes show an overall cooling off of inflation. Inflation is forecast to range between 2.0 and 2.5 percent. If the recent data on the price index for the Gross Domestic Product are any indication, the inflation rate may still be overstated.

¹Urban is defined here to include Douglas, Sarpy, and Lancaster Counties.

The near recent nose dive in the rate of growth in the other labor income component, benefits, has been reversed. The drop in the rate of growth of benefits took place as workers took on a larger share of benefit contributions, especially health insurance. Growth in benefits will be 3.0 percent in 1997 and 4.0 percent in both 1998 and 1999.

Data collected by the Nebraska Department of Revenue indicate that both dividends and interest are growing rapidly. Further, anecdotal evidence suggests that rents in major cities in Nebraska are climbing rapidly. Dividends, interest, and rent (DIR) will advance 7.0 percent in 1997, 6.0 in 1998, and 5.0 in 1999.

Nonfarm proprietors' income is forecast to be 8.0 percent for each year in the three-year period.

³Finance, Insurance, and Real Estate

Farm Income

There has been a slight reduction in the estimate of the state's crop production as a result of late October heavy snow in eastern Nebraska. The effects were highly variable across the state. Despite early snow, the corn harvest was slightly ahead of average through mid November. Estimates of the corn harvest for 1997 are 1.16 billion bushels. Losses have had no discernible impact on commodity markets.

The impact of the snow and on-ground storage at elevators will cause some extra drying expenses for grain farmers, marginally reducing the state's net farm income.

Asian markets are important for growth in Nebraska's agricultural exports. Recent disruptions in Asian financial markets may cause short-term weakness in the state's agricultural exports to Asian markets.

Livestock operations are still running in the black despite a decline in cattle prices compared to year ago. Conversely, calf prices increased almost one-third from October 1996 to mid October 1997.

Federal government transfer payments to Nebraska farmers will reach \$400 million in 1997, and will decrease to \$250 million in 1998.

Nebraska's net farm income will reach \$2.3 billion in 1997, then increase to slightly less than \$2.5 billion in 1998, and to \$2.5 billion in 1999.

Net Taxable Retail Sales

A slowdown in the growth of prices means that the growth of the dollar volume of sales may slow, even though the physical volume of sales continues to grow.

Other net taxable retail sales (nonmotor vehicle sales) increased 4.8 percent on a year-to-date basis through July 1997 when compared to a similar period in 1996. However, solid strength in income allows some optimism that the 4.8 percent figure will be exceeded. Growth is expected to be 5.2 percent per year from 1997 to 1999.

Motor vehicle net taxable retail sales will slow the advance from last year. Growth in 1997 will be 7.0 percent, and will slow further in 1998 and 1999 to 6.0 percent in each year. It is common to have two consecutive strong years of motor vehicle sales followed by more moderate advances.

Total net taxable retail sales will advance 5.4 percent in 1997, 5.3 percent in 1998, and 5.6 percent in 1999. The forecast for 1999 is tempered by the prospect of a moderate increase in inflation that year.
